

Introducing the **Caster Cleaner**™

Boosts Performance of ESD Wheels and Floors (1)

NEW!

Installs in a "Snap"

- Cleans wheels as they roll, reducing buildup of dirt and debris
- Less damage to and marking of floor finishes from dirty wheels
- Reduces maintenance time...less time spent cleaning wheels & floors
- Reduces ESD risks from ungrounded carts(2)
- Attaches easily without unloading or disassembling cart
- Replaceable cleaning element(2)
- Clean conductive casters outperform drag chains/cables (4) (5)
- Adds a duplicate ground path around potentially insulative bearings
- Works with most Metro®, Bliss and carts with similar 5 inch casters(6)
- Patent Pending

(1) Improves electrical connection to ESD floor to reduce risk from Electro-Static Discharge (ESD)
(2) When used with conductive flooring, conductive wheels, and grounded shelves
(3) Check for pad for contamination and wear at regular intervals depending on the cleanliness of your floor. Clean or replace pad as required. Pads typically last 25+ miles in a clean environment.
(4) Casters provide more weight as well as surface area to provide more consistent contact with ESD floor
(5) Per ESD Association, see <http://www.ce-mag.com/archive/2000/julyaugust/helpdesk.html>
(6) METRO® is a registered trademark. Static Dynamics is not associated or affiliated with Metro® or Bliss

See www.static-dynamics.com for more information and strategies on grounding
